ABSTRACT

In its Faculty Development Program, AAJC surveyed administrators to discover what in-service and other job-related programs now exist to encourage and help working teachers and to assess the availability and adequacy of continuing professional training. It covers only continuing or refresher studies for current faculty and staff, not pre-service academic preparation. Presidents of AAJC member colleges were asked to describe their own school's needs, and to compare them against the known national supply. Results from the 38% response are shown in graphic form. The data were collected and analyzed from March to June 1969. For each course area, data are given on existing and planned in-service training for college faculty and staff. Each section of the study has detailed and summary data on the national results. One appendix summarizes the results for the five geographical regions of the country, lists the states in each region, and the participating institutions. A second appendix gives more detailed tabular data on the survey's major results. A third reproduces the data collection instruments. The major observation was the deficiency of in-service training, which must be met by both 2- and 4-year institutions. The Association hopes this survey will serve as resource and stimulus to colleges, universities, government agencies, and all professionals concerned with the quality and quantity of in-service training. A later study will collect similar data from 2-year college faculty members. (HH)

PREFACE

Some 2 million students of all ages and backgrounds are today enrolled in 750 community and 250 independent and church-related junior colleges in virtually every state and territory of the country. To instruct and counsel a student body broad in its variety of characteristics, about 100,000 faculty members, administrators and other professionals are currently at work. These men and women have come to their tasks with a variety of backgrounds. They teach subjects as diverse as nursing and aeronautics, psychology and world affairs, chemistry and data processing. Located in rural areas, in small towns and in the heart of urban ghettos, these teachers and their professional colleagues share a paramount objective: to "make learning happen" for the fast-changing, fast-growing student population.

The quality of education which we experience is closely related to the quality of training and preparation of our instructors. Much of this professional preparation comes before pedagogical careers begin. However, there is an equally important requirement to keep teaching tools and abilities sharpened as new techniques and knowledge increase. Especially in the two-year institutions, teachers and other professionals clearly owe it to their students to remain alert and responsive to all significant developments, both in their special and related fields.

While many of us have long held feelings such as these, we have had only impressions about the real dimensions of the need for so-called in-service training. We have known even less about the kinds and amount of such training which is available, primarily at four-year colleges and universities. Without any firm basis of knowledge about the actual supply and demand for such training, concerned people could rely only on guesswork and hearsay.

With the publication of this Survey, we now begin to have available some solid evidence from which to draw conclusions. A clearer picture is taking shape, both nationally and regionally, of the growing field of staff development possibilities for professionals employed at the junior and community colleges throughout the country. The picture which emerges from the present study is by no means complete. However, it is a revealing and a suggestive one. On the one hand, we see the outline of a broad national demand for many types of in-service (or on-going) training which are thought (by two-year college administrators) to be needed for the staff. On the other hand, we begin to see how little of the needed work-related instruction is reported as available. The opportunities are too few for instructors, counselors, and other staff members to improve and increase their professional skills.

Despite this rather gloomy picture, there are some recent indications that the message has begun to "come across". In certain sectors, university seminars, government-funded institutes and foundation-aided workshops are increasing training opportunities for two-year college staff. Studies such as this one may contribute toward making these and other programs more responsive to the needs of our colleges for more and better staff development programs.

Edmund J. Gleazer, Jr. August 21, 1969

INTRODUCTION

In the fall of 1968, a prototype edition of the Association's <u>Guide to In-Service Training for Two-Year College Faculty and Staff Members</u> appeared. This document listed information on short courses and workshops which were held throughout the country for such professional people last year. This year, a more extensive AAJC Guide for 1969 was issued, listing some 200 training programs offered to administrative and instructional staff at these schools in 1969 and early 1970. Copies of both these publications were distributed to interested presidents, deans, faculty members and others in colleges and universities throughout the United States.

At approximately the same time as the 1969 AAJC Guide appeared, the first faculty and staff training grants were approved by the U.S. Office of Education under the new Education Professions Development Act (Part E). A complete list of projects funded for the first year of this program was also distributed nationally by USOE. In it were included \$2.2 million for 421 one and two-year fellowship grants, as well as \$4.7 million for training some 4000 participants in 78 short courses and workshops. A substantial percentage of the funds provided through both parts of this program was made available to train two-year college personnel at less-than-doctorate levels.*

In addition to the growing number of training programs listed in these separate directories, there are other signs of a recent national upsurge of interest in improving the preparation of professionals for staffing America's fastest growing sector of higher education - the junior and community colleges. Four-year colleges, universities and other training institutions throughout America are calling conferences and symposia on new and better ways of planning and cooperation to meet the staff development needs of local two-year colleges. Private consulting and research groups are also exploring the field as scores, even hundreds, of additional junior colleges are now in the conceptual or formative stages and are due to open soon.

This year the national figure for two-year college faculty reached 85,000. Another 11,000 people are employed as administrators of these institutions. Projections indicate that at least double and possible triple (or more) that number will be reported in the AAJC <u>Directory</u> a decade hence. Student enrollments are also growing by leaps and bounds. As of the Fall of 1968, over 1.9 million students were reported enrolled at a total of 993 two-year colleges. Recently, admission figures have been rising by some 250,000 to 300,000 new students every year.

This phenomenal pattern of growth must be viewed within the framework of an equally impressive expansion of curricular fields, diversification of student backgrounds, and of dramatic changes now occurring in the expanded sources of recruitment for new junior college professional staff members. Taking all these factors into consideration, the challenge becomes increasingly urgent to discover whether and to what extent such working teachers and administrators have available to them the kind and amount of job-related training which they really need. Put differently, do inservice programs now exist which will encourage and assist these people to really help "cause learning to happen" for nearly 2 million post-secondary students attend-

^{*} A more detailed analysis of this program, entitled "What Do the EPDA Awards Mean To the Two-Year Colleges?", is available from the Association.

ing two-year colleges throughout the USA? It is toward the task of assessing the availability and adequacy of such continuing professional training opportunities that this study is directed.

The Survey is intended to provide information only on continuing or refresher studies related to the work of current faculty and staff at American junior and community colleges. Information on pre-service academic programs designed to prepare new professional personnel is beyond the basic scope and interest of the present study.

To collect data for this publication, the Association asked presidents of its member colleges to describe their own "felt needs" for in-service development and improvement of their faculty and staff. These chief executives were then asked to compare this demand with the known national supply of relevant training opportunities. Some 288 or 38% of AAJC institutional members complied by completing and returning the survey questionnaire. Major results of this assessment are summarized in graphic form in a National Survey of Training Demand.

The next section of the study compares the "demand data" with the known supply of local training to meet it. For each course area mentioned by respondents, information is presented on the availability of in-service training known to be underway or planned by colleges and universities for junior college faculty and staff members throughout the country. In each section of the study, detailed and summary data is presented on the basis of national results. Subsequently, Appendix A summarizes survey results for the five geographical regions of the country - Northeast, South Atlantic, South, North Central and West. A list of the states in each region, together with the institutions which participated in the Survey, is also included. More detailed tabular data illustrating the major results of the Survey comprises Appendix B. Appendix C reproduces each data collection instrument used in the study. Information included was collected and analyzed during the period March to June, 1969.

Special thanks are due to Debbe Gladstone, Assistant to the Project Director, for her fine work and dedication throughout this study. The Association also wishes to express its gratitude to the many universities and colleges, both two and four-year, as well as to the other institutions and organizations which kindly cooperated by preparing and making available so much of the training information, and completing the in-service training questionnaires for inclusion in the Survey. In this connection, readers should note that no claim is made for the complete accuracy nor for the "national inclusiveness" of all data contained herein.

Before this study was begun, only suspicions existed about the national "deficiencies" which might turn out to exist in the in-service training supply and demand picture. Now, despité many good efforts by users and suppliers alike, it seems painfully evident that both two and four-year colleges still have a long way to go to "close the training gap". However, neither blame nor responsibility for this situation should be inferred from the publication of this Survey. Rather, the Association is sponsoring this publication in the hope that it may serve as a resource and a stimulus to colleges, universities, foundations, government agencies and for others professionally concerned with the need to understand and improve the availability, quality and particularly the relevance of in-service training for junior and community college personnel throughout the country.

Readers may be interested to note that, by the end of the year, the Association anticipates the publication of a companion volume to the Survey. This will be a study of the results obtained from a national sampling of two-year college faculty members who are now being asked essentially the same questions as those posed to administrators in this study.

NATIONAL SURVEY OF TRAINING DEMAND

This section reports, in graphic form, on the results of an inquiry into the priority needs and conditions for training faculty and staff members now employed at 288 junior and community colleges. The presidents and deans who responded were asked to name up to three areas, in each of six different curricular fields, in which they most wanted additional training for their personnel. Areas covered included academic; vocational/technical; general education, curriculum and learning; aspects of the two-year college; administration and supervision; and counseling and guidance.

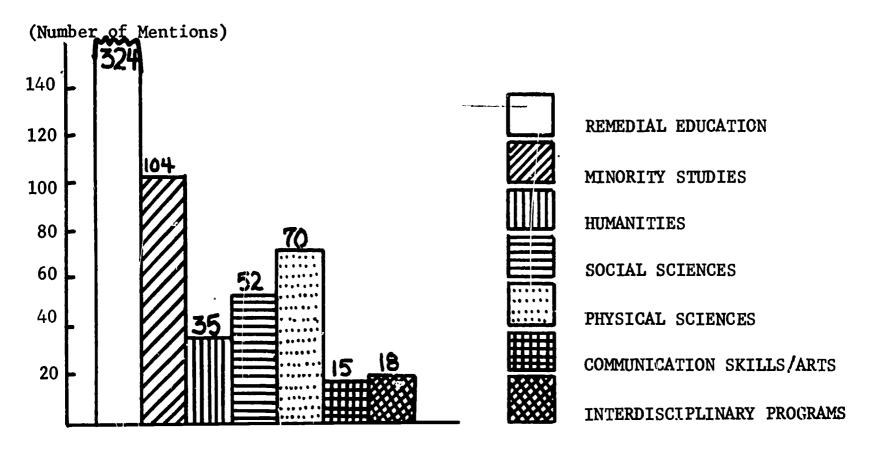

Information was also collected for this section on the preferences of junior and community college presidents as to training site locations, timing and duration of training, their possible cost contributions, the need they see for graduate credit for such instruction, and the local availability of in-service training. More specific information on this part of the Survey is contained in the appendices. These include a rank ordering of administrator's training preferences, expressed on both a regional and a national basis.

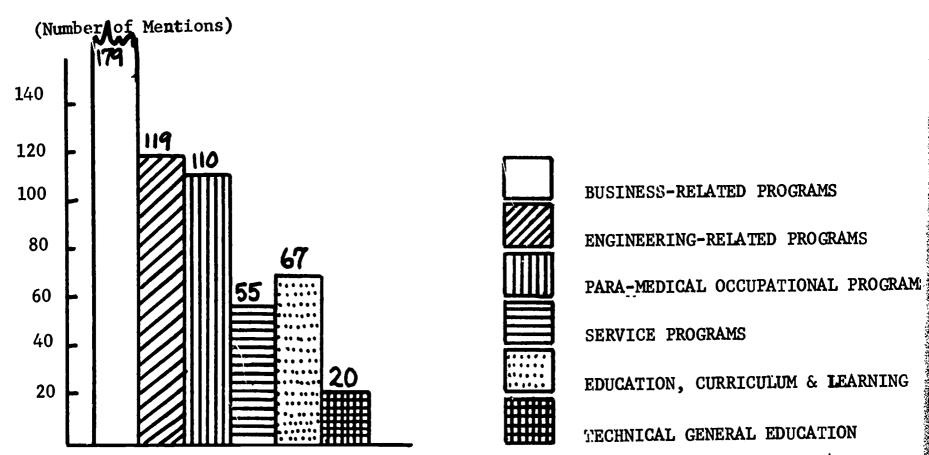

NATIONAL SURVEY OF TRAINING DEMAND

Data reflects the in-service training needs in greatest demand by the presidents of 288 member junior colleges of the Association who returned the questionnaire. Respondents listed up to three training priorities in each of six course areas - Academic, Vocational/Technical; General Education, Curriculum and Learning; Aspects of the Two-Year College; Administration and Supervision; and Counseling and Guidance.

A. ACADEMIC COURSE AREAS

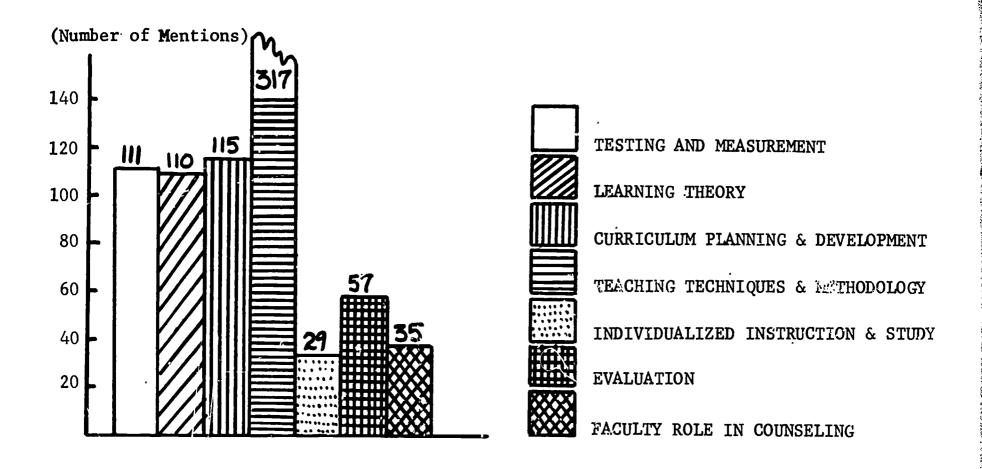

B. VOCATIONAL/TECHNICAL COURSE AREAS

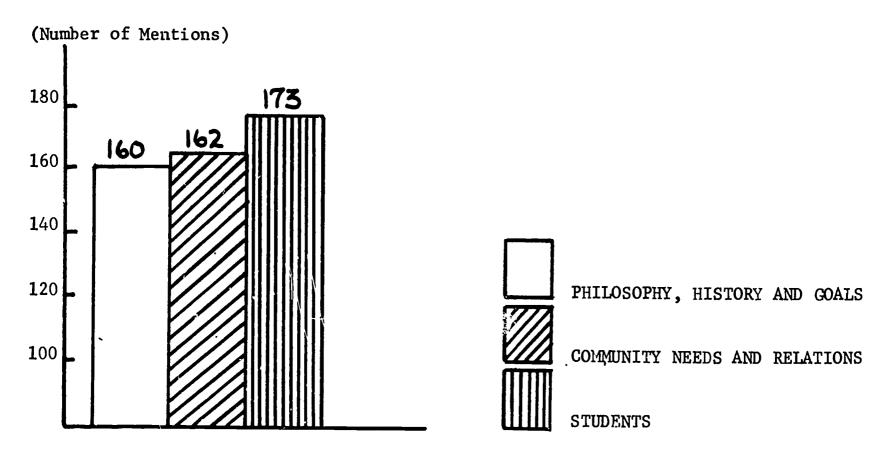

C. GENERAL EDUCATION, CURRICULUM AND LEARNING

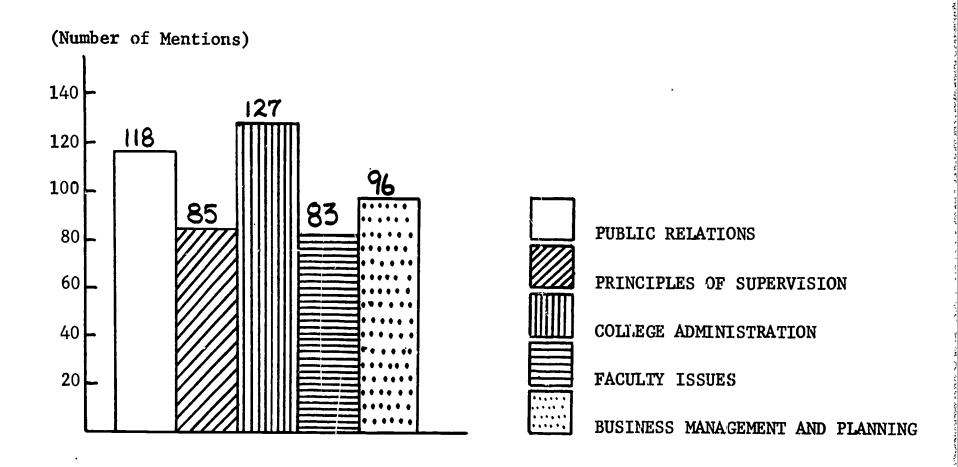

D. ASPECTS OF THE TWO-YEAR COLLEGE

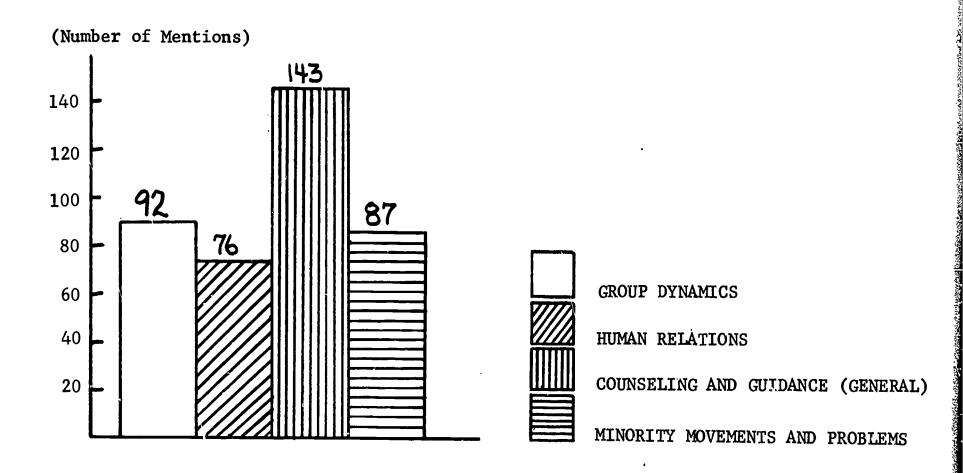

E. ADMINISTRATION AND SUPERVISION

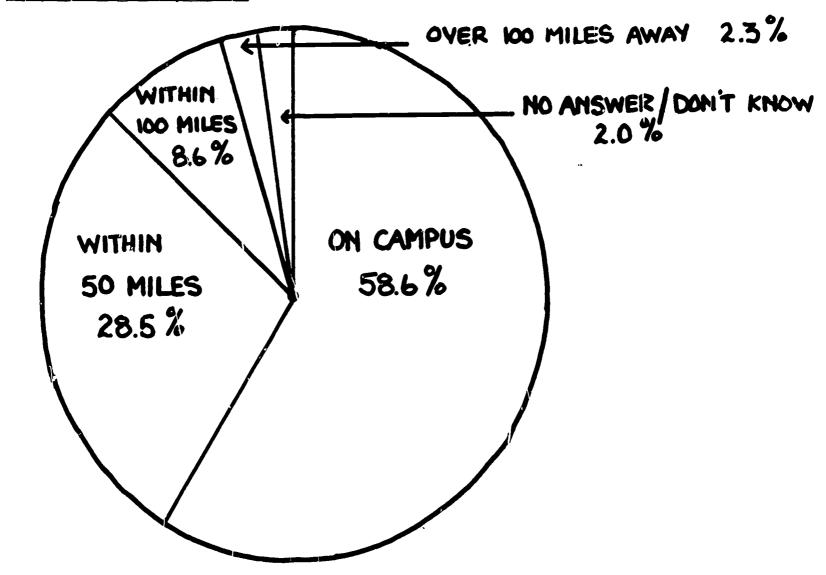

F. COUNSELING AND GUIDANCE

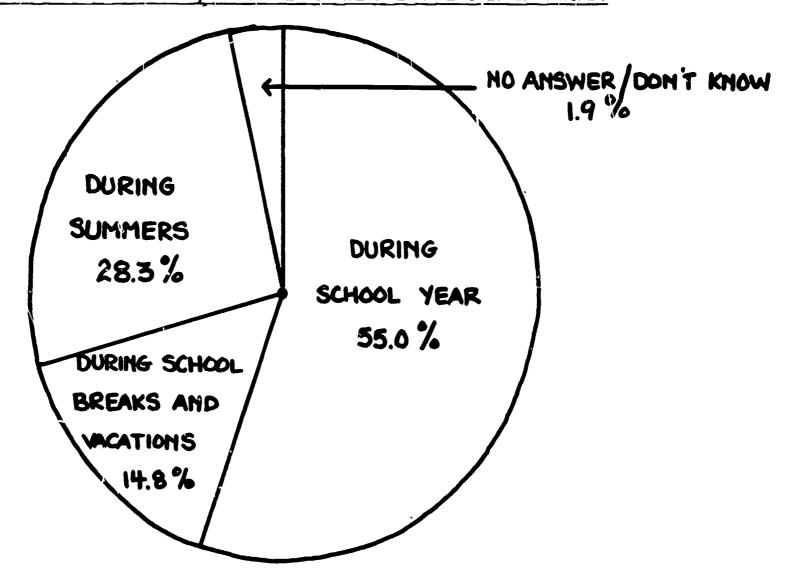

The following questions were asked to determine the basic conditions under which faculty training was most desired:

G. PREFERRED TRAINING SITÉ:

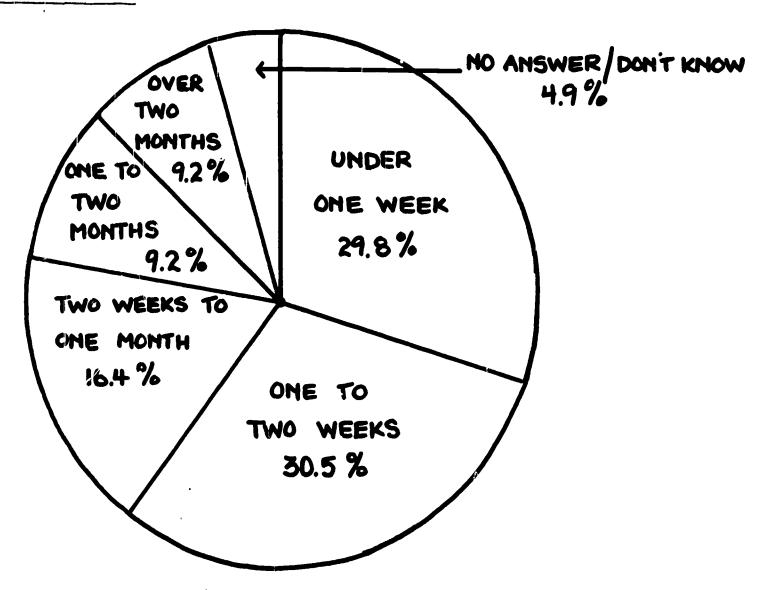

H. FOR GREATEST BENEFIT, SHOULD IN-SERVICE TRAINING BE ARRANGED:

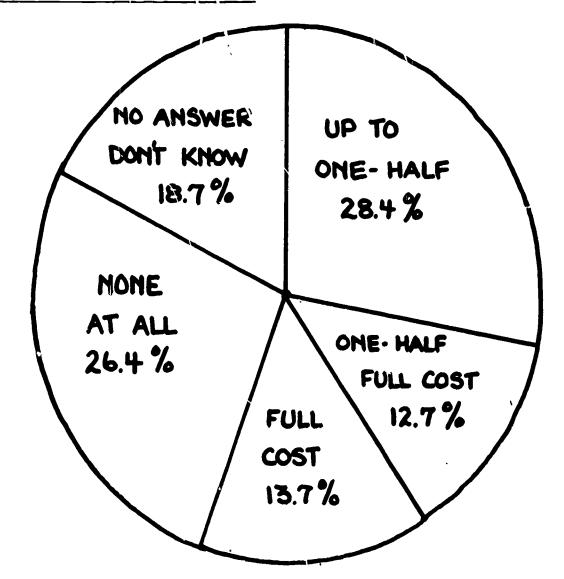

I. BALANCE BOTH AVAILABLE FACULTY TIME AND THEIR TRAINING NEEDS. HOW LONG SHOULD TRAINING LAST?

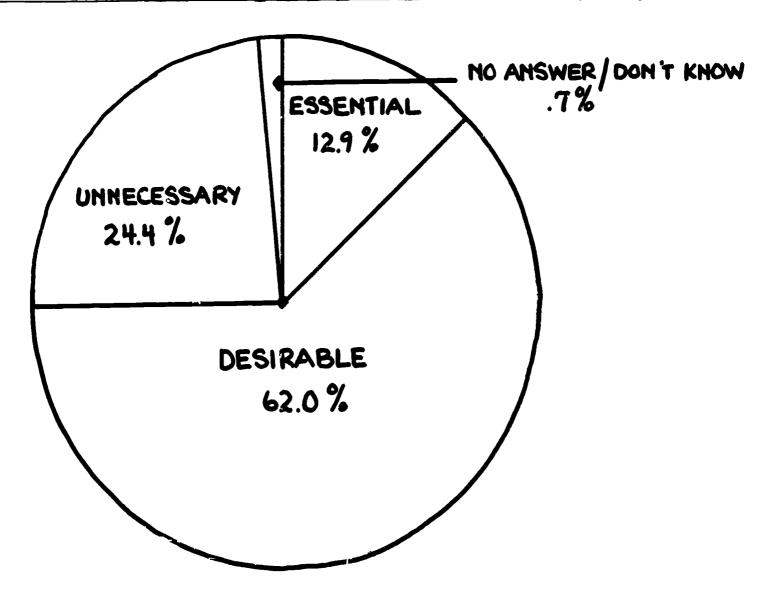

J. WOULD YOUR COLLEGE BE WILLING AND ABLE TO PAY INSTRUCTIONAL AND LIVING EXPENSES FOR THE TRAINING YOU WANT?

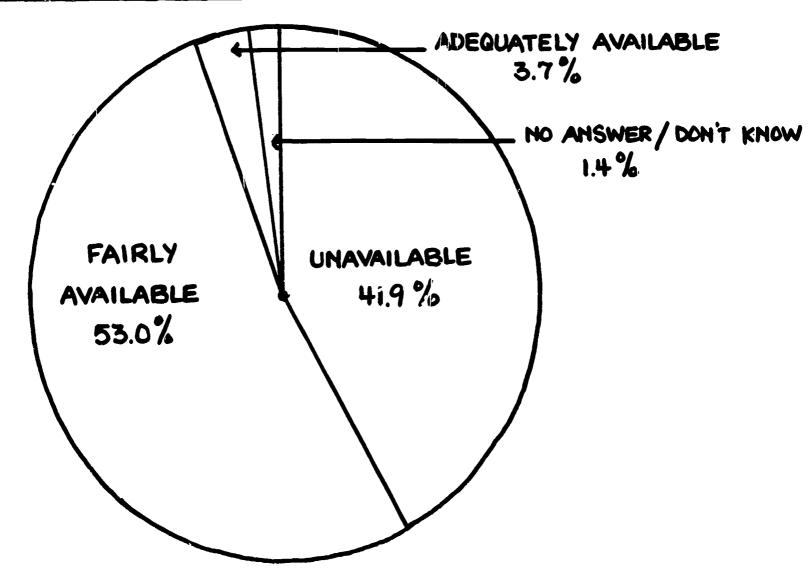

K. HOW IMPORTANT DO YOU CONSIDER GRADUATE CREDIT FOR IN-SERVICE TRAINING:

L. CONSIDER THE AVAILABILITY OF WORKSHOPS AND SHORT COURSES TO MEET THE IN-SERVICE TRAINING NEEDS OF YOUR INSTITUTION. OVERALL, ARE THEY:

SUPPLY AND DEMAND OF AVAILABLE TRAINING

This section presents once more the data on specific staff training needs (or "demand") which are felt by presidents of the participating colleges. Concurrently, an overview of the available national supply of such training through fellowships, workshops and short courses is presented.

The information which is included was derived from two principle sources: (a) the Guide to In-Service Training for Two-Year College Faculty and Staff Members (Washington: AAJC, 1969) and (b) the U.S. Office of Education's list of program awards for the Education Professions Development Act: Notification to Members of Congress (Part E), (Washington: U.S. Government Printing Office, 1969). For easier comparison, courses which were included in the AAJC Guide and in the Office of Education's list are described in accordance with the specific categories used in the National Survey of Training Demand.

The table which follows also summarizes by course field the priority training demands of the two-year colleges, and then compares them with the supply of in-service training currently available to instructors and staff at these institutions. About 50 fellowship programs, and a like number of workshops and short courses are listed, which are being given under EPDA auspices. Some 200 in-service training courses from the AAJC <u>Guide</u> are also included in the tables. Data from both of these sources relates to programs scheduled to be conducted in 1969 and early 1970.

SUMMARY AND CONCLUSION

In this Survey, the presidents of the two-year colleges which belong to the American Association of Junior Colleges, located in all 50 states, were polled on their needs for in-service staff development. Replies were received in time for inclusion from 288 colleges in 42 states. Each questionnaire was completed by a senior administrator, who was asked to specify the three areas in which his faculty or staff most needed further work (among six central categories of curriculum) as well as the terms and conditions under which he would prefer to see such training given.

Nationally, about a quarter of the demand expressed was for more training in the areas of general education, curriculum and learning. The two-year colleges are, after all, teaching colleges. Thus, it seems reasonable that their administrators should seek first and foremost to provide added training for staff and faculty members in more effective ways of handling the increasingly sophisticated tools and techniques of modern teaching.

Demand was also high from college presidents for improved training in the academic and occupational fields. Together, these two areas accounted for some 35% of the staff development programs desired by presidents of the institutions responding. The balance of training most wanted by these chief executives falls into three other categories: administration and supervision; aspects of the two-year college; and counseling and guidance.

From an overview of the results obtained in the Survey, several other conclusions stand out with great impact and clarity. First, the junior and community colleges are energetically striving to help their faculties live up to a reputation for responsiveness to the current needs and concerns of the society and students which they serve. Within every general category of training cited, the specific course areas which are most in demand all underline the increased felt need for contemporary relevance at the two-year colleges. For example, remedial and minority studies and guidance programs, data processing, and modern engineering technology are all in very heavy demand. The need for today's instructors to learn up-dated methods of testing and measurements, the latest discoveries in learning theory, techniques of programmed instruction, and ways of keeping abreast of new educational media and technology - all of these are clearly visible in the results of the Survey.

Consideration should also be given to other acute training requirements mentioned by the college presidents. For example, the single training area in greatest demand by responding colleges was: "The Philosophy, History and Goals of the Two-Year College". Such a strong desire gives clear evidence that America's junior and community college administrators are now sharply aware of the need to transmit to their teachers a greater sense of awareness, and an appreciation of the unique heritage of their institutions. A substantial number of presidents also indicated their wish for staff training to help their faculty better meet community needs and concomitantly, for improved handling of public communications and related activities so as to further strengthen the overall "service dimension" of their institutions.

A heavy demand for faculty programs in group dynamics and human relations was also apparent. This may represent an additional confirmation of the need indicated elsewhere by the colleges to find new and more effective ways to assist their teachers

in listening closer and responding better to the changing needs of their students. Increasingly, the two-year colleges are challenged to work with and teach a student body possessing a kaleidoscopic range of backgrounds, interests, career and study goals.

Training needs were also expressed by the administrators in terms of location, timing, costs and availability. Over half the presidents polled preferred to have training given on their own campuses. About the same percentage (55%) also indicated a preference for training during the school year, preferably for no longer than two weeks at a time.* Slightly over half the respondents also said that their institutions would be willing to pay some or even all the costs for staff training. An even larger proportion (about three-quarters of those who replied) thought that graduate credit for in-service training was either desirable or essential, in order to make in-service training most effective. Finally, an overwhelming 95% of the college administrators polled expressed their conviction that the training which their people needed was not adequately available within their regions at least at the present time.

The information included in this Survey does not yield either a complete nor an accurate national picture of all training programs and courses available to two-year college personnel. Undoubtedly, the AAJC <u>Guide</u> and the EPDA program lists are incomplete, and other training programs and opportunities are probably available. Many more months of research and analysis would be needed to do a really thorough job of data collection to completely cover the field. However, even if incomplete, the data which is available on training supply clearly suggests a bleak picture, with a serious national "training gap" reported in the Survey from two-year college presidents and deans in every section of the country.

To illustrate, Table 1. ranks and summarizes the administrators preferences for inservice training course areas for their personnel among six professional training fields.

TABLE 1.

GENERAL TRAINING REQUESTED (Up to 3 mentions per college)

- 1. Education, Curriculum and Learning 774
- 2. Academic 618
- 3. Vocational/Technical 549
- 4. Administration and Supervision 509
- 5. Aspects of the Two-Year College 495
- 6. Counseling and Guidance 398

^{*} It became evident from answers to some questionnaires that a number of administrators would prefer continuing or extension education courses for their faculty and staff members. However, since this choice was not included in the inquest, such answers are not tabulated.

Table 2. refines the data further by specifying the top three training priorities of the respondents, within each major training field.

TABLE 2.

	SPECIFIC TRAINING REQUESTED (Up to 3 mentions per college)			
1.	Academic Remedial English - 133 Remedial Reading - 86 Afro-American Studies - 77	2. Vocational/Technical Data Processing - 114 Engineering-Related Programs - 109 Para-Medical Programs - 75		
3.	Education, Curriculum and Learning Programmed Instruction - 118 Testing and Measurement - 111 Learning Theory - 110	4. Aspects of the Two-Year College Philosophy, History & Goals - 160 Community Needs & Relations - 122 Student Profile - 86		
5.	Administration and Supervision Public Relations - 118 Principles of Supervision - 85 Business Management & Planning - 66	6. Counseling and Guidance Group Dynamics - 92 Minority Movements & Problems - 87 Human Relations - 76		

Table 3. summarizes the other central conclusions from the Survey as they relate to the preferences and opinions of college administrators concerning the conditions of training.

TABLE 3.

PREFERRED TRAINING CONDITIONS

- -- 177 respondents out of 302 indicated "on campus" as the preferred training site.
- -- 175 respondents out of 318 indicated "during school year" as the time of greatest benefit for in-service training.
- -- 184 respondents out of 305 preferred in-service training of under two weeks.
- -- 164 respondents out of 299 indicated a willingness to pay up to full cost for in-service training.
- -- 221 respondents out of 295 consider graduate credit for in-service training either desirable or essential.
- -- Out of 296 responses, 281 felt that in-service training is either unavailable (124 respondents) or only fairly available (157 respondents).

(The total sample used was 288. However, some respondents indicated more than one preference in response to each question.)

According to the data collected, there seems to be only a handful of fields in which the training in greatest demand is available in significant quantity. Such a short list might include some National Science Foundation programs in the physical sciences; a number of courses in the philosophy, history and goals of the two-year colleges; and a few programs each on teaching techniques and methods, modern educational administration and general guidance and counseling. Thus, without any doubt whatsoever, much more must be done if a noticeable dent in the "felt needs" for faculty and staff development is to be made in the two-year colleges. Training needs are seen to be especially acute in areas where these schools are growing fastest, particularly where financial support for personnel development programs seems most available. However, the basic problem is similar everywhere: more and better relevant graduate training for two-year college faculty is needed in every region of the country. Table 4. suggests the serious and growing gap which now prevails between the known supply and demand for in-service training.

TABLE 4.

SUPPLY AND DEMAND OF TRAINING

Significant Fields In Which Desired In-Service Training is Generally Available*

- Humanities
- Physical Sciences
- Curriculum Planning and Development
- Educational Media and Technology
- Teaching Techniques and Methodology
- Philosophy, History and Goals
- Principles of Supervision
- College Administration
- Counseling and Guidance (General)
- * 8 or more programs scheduled
- *** 30 or more requests from respondents

Significant Fields In Which Desired In-Service Training is Generally Unavailable**

- Remedial English

- Faculty Role in Counseling
- Community Needs and Relations
- Student Profile
- Students (General)
- Public Relations
- Faculty Issues
- Budgeting
- Business Management and Planning
- Group Dynamics
- Human Relations
- Minority Movements and Problems

Today, there are some 85,000 instructors at work in nearly 1000 two-year colleges in America. Their numbers are now increasing by some 15% to 20% each year. A quarter of a million teachers at these schools are foreseen by the end of the next decade, serving as many students as are enrolled today in all of the institutions of higher learning in the country (6 million). The amount and complexity of courses for which these swelling ranks of teachers are responsible are growing even faster. Clearly, additional training programs, with a greater impact in meeting the acute challenges faced by faculty members at these colleges are needed - and they are needed now!

It is hoped that this modest study can help to inform and inspire with a sense of urgency those who must plan for and mobilize the resources so urgently needed for future faculty development efforts. If it does suggest to such educators, foundation and government officials some positive directions to chart in view of the awe-inspiring dimensions of the challenge at these burgeoning schools, then the Survey will have fulfilled its central purpose.

NORTHEAST REGIONAL SURVEY OF TRAINING DEMAND

The data reflects the in-service training needs in greatest demand by the presidents of 56 member junior colleges of the Association in the Northeast Region who returned the questionnaire. Respondents listed up to three training priorities in each of six course areas - academic; vocational/technical; general education, curriculum and learning; aspects of the two-year college; administration and supervision; and counseling and guidance.

NORTH CENTRAL REGIONAL SURVEY OF TRAINING DEMAND

The data reflects the in-service training needs in greatest demand by the presidents of 78 member junior colleges of the Association in the North Central Region who returned the questionnaire. Respondents listed up to three training priorities in each of six course areas - academic; vocational/technical; general education, curriculum and learning; aspects of the two-year college; administration and supervision; and counseling and guidance.

SURVEY INSTRUMENTS

AMERICAN ASSOCIATION OF JUNIOR COLLEGES

1315 SIXTEENTH STREET, N.W., WASHINGTON, D.C. 20036

PHONE 462-4031

EDMUND J. GLEAZER, JR. Executive Director

WILLIAM G. SHANNON

Dear AAJC Member:

Recently, I contacted a number of professional and education associations, universities and colleges to ask about their plans, and their knowledge of others' plans to conduct in-service faculty and staff training programs this year for two-year college personnel. In a follow-up to the Association's prototype (1968) <u>Guide To In-Service Training</u>, we inquired about short courses and workshops in professional areas, training for administration and supervision, discipline programs, vocational and technical training, counseling/guidance, and similar training. Common to all of these categories was the stipulation that such training be specifically devised, or completely suitable for, community and junior college instructors and staff.

The response to our inquiry, which was made to obtain current data for our forth-coming 1969 Guide, has been most gratifying. Timely information has been obtained on over two hu dred suitable programs. As a result, the 1969 Guide has "gone to press" substantially richer and "fatter" than its 1968 predecessor. It does not include data on training offered under the Education Professions Development Act (EPDA). Information on these programs can be obtained directly from the U.S. Office of Education in Washington, D.C.

Meanwhile, many AAJC member colleges and several major professional associations also have been considering what the in-service training priorities should be for their two-year college teachers. A preliminary review of such lists indicates another possible dimension of service for our project.

A sample of one of these lists is attached. It happens to be for English teachers, but its style and format could apply to instructors in many other subjects. You will note that the list has been "streamlined": it is short and to the point. Significantly, its contents were discussed and refined recently by a representative cross-section of practicing two-year college teachers. This training priority list will be sent out to universities and others interested in carrying out short, in-service faculty workshops and short courses. In addition, it will be carefully compared with data which now reaches us from all over the country on workshops and short courses planned annually.

It is our hope and belief that a successful comparison and screening of such priority lists can result in significant guidance to training institutions in the future. The universities' ability to respond more accurately to the "felt training needs" of our two-year colleges can thus be enhanced. Their willingness to change the emphasis and directions of their programs, where this can be shown to be desirable, may also be increased. If significant training needs, clearly identified by you and your faculty, are not met and cannot be filled by existing programs, then

other arrangements might be sought. Consequently, I am hoping for a good response from all two-year colleges concerned with in-service training opportunities for their faculty and staff.

Summer training decisions and budgets generally are set many months in advance. When the colleges, universities and other training sponsors learn from an authoritative source what training community junior college teachers really need and want, then they are more likely to provide it at the level, duration, location and with the structure and content most in demand.

Naturally, not everything can be done through short, in-service courses, important as such training may be. Graduate level, pre-service education should and must be relied upon for much of the "core" education and training for future faculty. The optimum nature, duration, content, location, etc. of these pre-service programs are the objects of separate studies and investigations. For now please confine your considerations just to the special needs which should be met through partitime courses, workshops and training seminars for your instructional and administrative staff.

Thank you in advance for your cooperation and assistance.

Yours sincerely,

Derek S. Singer Director, Faculty Development Project

AMERICAN ASSOCIATION OF JUNIOR COLLEGES

1315 SIXTEENTH STREET, N.W., WASHINGTON, D.C. 20036 / PHONE 462-4031

EDMUND J. GLEAZER, JR. Executive Director

WILLIAM G. SHANNON Associate Executive Director

Dear President:

Some results have come in from the letter and brief questionnaire I sent you, inserted in your copy of the "1969 Guide to In-Service Training for Two-Year College Faculty and Staff Members." The information we are obtaining from your reactions and suggestions can really be useful - if....

The big "if" is this: if enough of you let us know about your own staff training needs, we will have good leverage to make your voices heard. Those who will be listening include the colleges, universities, foundations and government offices with training resources available. Ir our sample is too small, they simply will not listen seriously when we tell them just what training you really need for your faculty and staff. In short, more returns must come in before we can be sure what you want, and then start convincing training sources to get it for you!

Another copy of the questionnaire is attached. If you have sent it in already, ignore it. If not, please help us to help, and send it back soon. You might wish to give this form to your Dean, Faculty Association or Faculty Senate head. I will gladly send him a complimentary copy of the Guide when I receive back the questionnaire.

Yours sincerely,

Derek S. Singer Director, Faculty Development Project

P.S. Comments and suggestions concerning this year's Guide itself would also help us decide on its value to you as an annual AAJC publication.

American Association of Junior Colleges FACULTY DEVELOPMENT PROJECT

PRIORITY NEEDS FOR IN SERVICE FACULTY AND STAFF TRAINING

	IRSE CATEGORY
1.	Academic (list up to three priorities, e.g., Remedial English, Afro- American Culture, Ecology)
	8.
	b
	c
2.	Vocational/Technical (e.g., Oceanography, Inhalation Therapy, Data Pro- cessing)
	a
	b
	c.
3,	Education, Curriculum and Learning (e.g., Modern Tests and Measurements, Programmed Instruction, Learning Theory)
	a
	b
	c.
4.	Community Junior Colleges (e.g., Philosophy and Goals, Student Profile, Understanding Community Needs)
	a
	b
	c
5.	Administration and Supervision (e.g., Modern Supervision, Public Relation Business Management)
	a
	b

	6.	Counseling and Guidance (e.g., Human Relations, Group Dynamics, Minority Movements)
		a
		b
		C .
	7	List your three most urgent training needs:
	•	
		a.
		b
		C.
В.	Prei	ferred Training Site (check one):
	1.	On campus
	2.	Within 50 miles
	3.	Within 100 miles
	4.	Over 100 miles away
c.	For	Greatest Benefit, Should In-Service Training Be Arranged (check one):
	1.	During school year
	2.	During school breaks and vacations
	3.	During summers
	4.	During sabbaticals
D.	Bal sho	ance both available faculty time and their training needs. How long ould training last? (check one):
	1.	Under one week
	2.	One to two weeks
	3.	Two weeks to one month
	4.	One to two months
	5.	Over two months

E.	Would your college be willing and able to pay instructional and living expenses for the training you want? (check one):
	1. We to one-half
	2. Ome-half the full cost
	3. Full cost
	4. None at all
F.	How important do you consider graduate credit for in-service training? (check one):
	1. @ssential
	2. Desirable
	3. Unnecessary
G.	Consider the availability of workshops and short courses to meet the in-service training needs of your institution. Overall, are they:
	l. Unavailable
	2. Fairly available
	3. Adequately available
